

OPTIMISTIC[®]

MOVE TO SUCCESS

**LOOKING FOR
MACHINE
FRAMES AND
SKIDS?**

**PIPING,
PACKAGING
AND
ASSEMBLING?**

WE ARE A PORTUGUESE COMPANY WITH A VAST EXPERIENCE IN MANUFACTURING

Often idealized by our experienced engineers who carefully follow every project, our highly skilled team is responsible for producing outstanding products according to the most demanding international standards.

In this brochure we present our machine frames and skids produced in our 7000sqm factory in Batalha, Portugal. With optimism and determination, we operate to our best capabilities. Our highest ambition is to meet customer demand.

**We would love to work with you:
Move to success, move with Optimistic!**

OUR MACHINE FRAMES AND SKIDS

In most cases, industrial machines in the manufacturing and processing industries cannot be placed directly on the floor. These machines need to be elevated using frames to connect with other equipment or to mitigate vibrations by incorporating buffers.

Screening machines for processing dry bulk goods are designed with robust frames to absorb both weight and vibrations. Similarly, pumps used in the concrete or manufacturing and processing industry are elevated to the correct height using frames.

We produce base frames and chassis for equipment and machines used in the oil and gas industry. Through 3D design, our experienced engineers design these frames to ensure assembly and placement are eased, while efficiently identifying any potential obstacles. Furthermore, we conduct strength calculations to ensure each design meets all necessary requirements and the outcome meets customer needs.

Our professional team can assure your skid or frame will be produced with certified welding, including non-destructive testing (NDT) welding investigations, in accordance with a clear inspection and test plan (ITP).

To provide our products long-term protection, durable surface treatments such as 'schooping' (metalizing spray), galvanizing, and multi-layer coating systems in the form of wet paint or powder coating are applied.

We also produce serial machine to the highest standards.

Optimistic's highly experienced team will provide you top end solutions at an attractive price. We love a good challenge, and our main ambition is to match client demands.

PIPING, PACKAGING AND ASSEMBLING

In rotary equipment industry, other than skids and frames, you need to do piping and mechanical assembly as well.

We provide machine assembly, installation and commissioning services at the specified requirements of our clients.

We can meet the required mechanical assembly, electrical cable and panel assemblies, installation assemblies, automation works according to the project needs as well.

Optimistic's highly experienced team will provide you top end solutions at an attractive price. We love a good challenge, and our main ambition is to match client demands.
